

Math 1226: Calculus of a Single Variable Fall 2026

Quick reference

- Instructor: Zuriah Quinton (they/them)
- Email: zquinton@vt.edu
- CRN: 87499
- Office: McBryde 466-G (may change)
- Meetings: Monday/Wednesday/Friday 2:30-3:20pm in GBJ 102 and Tuesdays 5:00-5:50pm in PAM 3004
- Walk In Student Hours: Tuesdays 10-11am, Thursday 4-5:30pm, Fridays 11:30am-12:30pm, or by appointment.
- Textbook: Calculus: Early Transcendentals, 9th edition, by James Stewart with WebAssign Access
- Prerequisite: Math 1225 (minimum grade of C-) or an equivalent course
- Credits: 4 credits
 - Virginia Tech's credit-hour expectations indicate approximately 2 hours of out-of-class work per week for each credit hour. For this course, this corresponds to approximately 8 hours per week.

1. Instructor

Hi! I am Zuriah Quinton, I am a graduate student in the math department. I love teaching, reading, and crocheting. This is my first time teaching Math 1226, but I have taught a few other courses before this one. My pronouns are they/them, and you can call me Zuriah, Quinton, Mx. Quinton, Instructor Quinton, etc (I don't have my PhD yet so I am not a Dr, nor am I a professor, nor am I a Ms). I am excited to be teaching this course, and I hope we can all learn a lot together! Please reach out to me before/after class, in office hours, or by email if you need anything.

2. Course Content and Prerequisite Information

Topics of study include techniques and applications of integration; numerical integration using the Trapezoidal and Simpson's Rules; improper integrals; sequences and series; power series; and parametric curves and polar coordinates. Software may be used to supplement analytical methods and to facilitate computational and graphical exploration.

Note that the course has a prereq of Math 1225 (or similar course). This is to ensure students have the proper skills going into this course to support their success. The Department of Mathematics encourages each student enrolled in MATH 1226 to take, at the beginning of the term, an online Basic Skills Review covering basic concepts from MATH 1225. Access to the Basic Skills Review will be available through WebAssign.

The **Basic Skills Review** is a tool you can use to determine if you have been properly placed into this class. Please note that I want everyone to succeed in this class, and if you feel you are missing some of these fundamentals I highly encourage you to fill in those gaps with me during student hours.

3. Communication

Course announcements, notices, and updates will be posted on <https://canvas.vt.edu>. Students are responsible for checking Canvas notifications regularly. Canvas is the primary

location for all content in this class. It is linked to WebAssign, and will show due dates for all other assignments as they come up.

For questions about the course, students are encouraged to speak with the instructor before or after lecture or during office hours. Individual questions or matters that require a written response may be addressed by email. When contacting the instructor by email, please use your Virginia Tech email account and include MATH 1226 in the subject line.

4. Attendance

Attendance is not directly included in the calculation of your course grade. However, regular attendance is strongly encouraged, as students who attend class consistently are generally better prepared to succeed in the course. Please note that graded in-class activities, such as quizzes, group work, or tests, may affect your course grade if you are absent when they are administered.

If a student misses a class, they should obtain the notes and any announcements or assignments from a classmate. If an illness, bereavement, or other significant personal circumstance prevents a student from attending class, completing an assignment, or taking a quiz or exam, they should contact the instructor (and possibly the Dean of Students) as soon as possible. It may be possible to adjust due dates/exam dates in particular circumstances, so please reach out if those should occur.

5. Tests

Three equally weighted midterm tests and a final exam will be given during the course of the semester.

Test	Date	Time
Test 1	Monday, September 21	In Class
Test 2	Monday, October 19	In Class
Test 3	Wednesday, November 18	In Class
Final Exam	Monday, December 14	1:05 pm ET - 3:05 pm ET

Students must take tests on the specified date. If a student misses a test for reasons that are serious, unavoidable, and beyond the student's control, the situation will be handled on an individual basis. The final exam will not be rescheduled for discretionary reasons, including conflicts with work schedules, conflicts with classes and exams at other colleges, and travel plans.

6. Assignments and Quizzes

Students will complete a variety of coursework throughout the semester, including in class quizzes, group work, written homework assignments, reading assignments, and other course activities. A sample schedule is given below to demonstrate typical due dates and set expectations.

	Monday	Tuesday	Wednesday	Friday
Before Class	Read section 1 and complete	Read section 2 and complete	Read section 3 and complete	Read section 4 and complete

	Monday	Tuesday	Wednesday	Friday
	related assignment	related assignment	related assignment	related assignment
During Class	Follow lecture/ do group work for section 1	Follow lecture/ do group work for section 2	Follow lecture/ do group work for section 3	Follow lecture/ do group work for section 4
End of Class	...	...	Short quiz on section 1	Short quiz on section 2
After Class	...	Complete WebAssign section 1	Complete WebAssign section 2	Complete WebAssign section 3

and the following Monday a quiz on section 3 would be given and so on. Quizzes are not given on test days, and this schedule is subject to change. Updates will be given in class and on Canvas.

At the end of the semester, 5 quizzes will be dropped should students miss a few days of class. Note showing up for only the last 5-10 minutes for the quiz is not allowed, it is distracting to other students. Except in cases that are serious, unavoidable and out of the student's control, if a student shows up only in the last few minutes of class for the quiz, they will not be given a quiz. If you feel you need to arrange such accommodations please email me to discuss.

The instructor may at times assign traditional take-home homework in addition to the discussed assignments if needed.

7. WebAssign

WebAssign assignments will be assigned regularly, and they will typically be due at 11:59pm ET on the class day following the scheduled lecture. Each question will typically have three attempts, however, multiple choice questions may be adjusted according to the number of available responses. The lowest six Webassign scores will be dropped. For any questions concerning WebAssign access or support, call (toll-free) 800-955-8275.

Please note the WebAssign assignments are worth 3% of the final grade. The purpose of this assignment is not to get everything perfect on the first try, but to get sufficient practice and see a variety of problems. Multiple attempts are encouraged so students can make mistakes and sort out what went wrong. This is an important part of the learning process for math and should not be skipped.

8. Grading

The final course grade is based on the following components:

- 20% In-class quizzes and homework
- 3% WebAssign
- 2% Before Class Reading assignments
- 54% Tests (3 tests each 18%)
- 21% Final Exam (10.5% multiple choice, 10.5% free response)

Any homework will be worth no more than 5% of the total grade, if assigned.

A 90% will guarantee an A-, 80% a B-, 70% a C-, and a 60% a D-.

9. Make-up Policy

Except in cases that are serious, unavoidable, and beyond the student's control few assignments can be made-up. Note 6 WebAssign assignments and 5 in-class quizzes are to be dropped at the end of the semester to accommodate most situations. If you are missing more assignments/classes than this please email the instructor and/or the Dean of Students to determine the best course of action in such cases.

10. Grading Appeals

Specific grading disputes (points totaled incorrectly, partial credit appeals, missing assignments on Canvas, etc.) should be brought to the instructor's attention within **3 days** of return of the assignment. Coming to me within this period does not guarantee a grade change, only my consideration. Appeals outside this timeframe will not be considered.

11. Creating a Supportive Learning Environment

Students and the instructor share responsibility for creating a respectful and supportive learning environment. Conduct—including physical, verbal, and online behavior—that disparages, harasses, or threatens members of the Virginia Tech community is not welcome at Virginia Tech and will not be tolerated in this course. The course follows the Virginia Tech Principles of Community.

The instructor is committed to addressing students by their preferred names and pronouns. Students who would like to communicate a preferred name or pronouns may do so at any time during the semester, in person or by email.

The instructor strives to provide a learning environment in which students feel supported and comfortable raising concerns about the course. Students are encouraged to bring concerns directly to the instructor whenever possible, as this is generally the most direct way to address or resolve an issue.

Students who do not feel comfortable bringing a concern directly to the instructor may seek assistance from Virginia Tech resources, including:

- **Cook Counseling Center** (<https://ucc.vt.edu/>), which provides counseling, psychiatric services, psychotherapy, and other mental health services for students.
- **Schiffert Health Center** (<https://healthcenter.vt.edu/>), which provides a variety of medical services for students.
- **Office of the Dean of Students** (<https://dos.vt.edu/>), which can provide advocacy, guidance, and assistance in identifying appropriate university resources. The Office of the Dean of Students can also provide class absence verification when a student needs to miss class for an extended period.

12. Commitment to Wellness

Virginia Tech is committed to protecting the health and safety of all members of its community. By participating in this class, all students agree to abide by the Virginia Tech Wellness principles. Updated university policies can be found at <http://hdl.handle.net/10919/99415>.

13. Accommodations

Virginia Tech welcomes students with disabilities into the University's educational programs. The University promotes efforts to provide equal access and a culture of inclusion without altering the essential elements of coursework. If you anticipate or experience academic barriers that may be due to disability, including but not limited to, chronic medical conditions, Deaf or hard of hearing,

learning disability, mental health, or vision impairment, please contact the Services for Students with Disabilities (SSD) (540-231-3788, ssd@vt.edu, or visit <https://ssd.vt.edu/>.)

Students with an SSD accommodation letter should contact the instructor as early in the semester as possible to discuss the implementation of their accommodations. Students may speak with the instructor during office hours, before or after class, or arrange another time if they prefer to discuss their accommodations privately. **Students should provide reasonable notice when requesting accommodations, generally at least 10 business days.**

14. Resources

14.1. Student Hours

Student Hours (also known as Office hours or Drop In Student Hours) are scheduled times I set aside to answer any and all questions students may have. They are usually hosted in my office, and you are **highly encouraged** to attend. Please bring any work in progress questions from online or written assignments or any specific questions you have about the course or its materials. Reminder that you may not use AI on any graded assignments, but if you bring me questions I can walk you through them, pinpoint where your confusion is, and recommend advice for you and your success in my course (and I don't destroy the environment!)

14.2. Student Success Center

Success in any math class is all about consistent practice and good study habits. The Student Success Center can help with both. The Student Success Center offers free academic support to help you build confidence, improve your study strategies, and stay on top of coursework—whether you're aiming to raise your grades or maintain your momentum. Services include tutoring, academic coaching, and interactive seminars on topics like time management and test prep. All sessions are led by trained peer educators who understand the student experience and genuinely want to help. **I may offer some small amount of extra credit for attending some of the Seminars that the SSC hosts.**

14.3. Tutoring in the Department (to be determined)

Free tutoring for MATH 1226 is available through the Virginia Tech Department of Mathematics Tutoring Lab. Students may drop in during open hours; no appointment is required. (This may not exist during Fall 2026, if that is the case please complain to your department about it.) Additional free tutoring is available through the Student Success Center and Knack. For current hours, course-specific availability, and additional tutoring options, visit: <https://math.vt.edu/undergrad-math/tutoring.htm>

15. Honor System

All graded work submitted in this course must represent the student's own work and understanding. Students may discuss homework and quiz material with classmates and with the instructor. However, when preparing work to be submitted for grading, each student must work independently and must write the solution in their own words and based on the student's own understanding.

Students may not consult partial or complete solutions to assigned problems that have been prepared by someone else while completing graded work. This includes, but is not limited to, solutions prepared by current or former instructors or students at Virginia Tech or elsewhere, whether the solutions are available online or through other sources. The Honor Code applies to all graded work in this course.

Notes, assignments, quizzes, tests, exams, solutions, and other materials distributed or generated for this course are intended for use **only by students enrolled in this CRN during the current semester. Without written permission from the instructor, students may not distribute, post online, or otherwise make such materials available to anyone who is not enrolled in this section during the current semester.** This includes uploading course materials, tests, or solutions to websites or other online platforms. The prohibition on sharing solutions applies regardless of who originally prepared the solution.

The Undergraduate Honor Code pledge states:

"As a Hokie, I will conduct myself with honor and integrity at all times. I will not lie, cheat, or steal, nor will I accept the actions of those who do."

Students enrolled in this course are responsible for understanding and following the Honor Code. Students who are uncertain whether a particular activity or resource is permitted should seek guidance from the instructor before submitting the work for evaluation. Academic integrity expectations are the same for online and in-person courses. All applicable Virginia Tech policies and procedures apply in every academic environment.

For additional information about the Honor Code, visit: <https://www.honorsystem.vt.edu/>.

16. Artificial Intelligence

The use of generative AI tools, including ChatGPT, Claude, Gemini, and similar systems, is not permitted on graded coursework unless explicitly authorized by the instructor.

All submitted work must represent the student's own mathematical reasoning and understanding. Students may not use generative AI to generate, solve, rewrite, or substantially modify solutions that are submitted for homework, quizzes, exams, or other graded assessments.

Generative AI tools may be used for general studying and learning outside of graded coursework, provided that such use does not circumvent the requirements of an assignment or assessment. However, the instructor does not believe such tools are in your best interest as a learner. It is crucial you build foundational knowledge of the subject without these tools since they may be wrong, and there are so many existing alternatives to support you in this class. Instead, it is highly encouraged that students reach out to the many free, human resources available to them through the university before using AI tools. Further, so many extra practice problems already exist and do not need to be generated: WebAssign's practice tools, Paul's Online Notes, the problems in our textbook (or any calc 2 textbook!), etc. Please see the Resources section above for more information, or email the instructor if you need help finding such resources, they would be happy to direct you.

For all intents and purposes in this course, large language models and other forms of generative AI are considered people not enrolled in this course. This means that under no circumstances can such programs be used to generate complete or partial solutions to problems given. Similarly, making any class materials available to such programs is not allowed.

The use of generative AI on graded work is considered the use of an external aid. When such use has not been authorized by the instructor, it may constitute a violation of the Virginia Tech Honor Code. Students who are uncertain whether a particular use of AI is permitted should consult the instructor before submitting the work.

This course policy sheet is subject to change in response to changes in university policies or circumstances affecting the course. Any updates will be posted on Canvas. Students are responsible for reviewing the updated policy sheet and familiarizing themselves with any changes.
